

History– lives of significant figures

Moon Zoom!

The Solar System

Our Solar System is made up of the Sun and everything that orbits around it. There are eight planets in our Solar System. They are called Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Mercury is closest to the Sun and Neptune is furthest away. There are also asteroids, moons and dwarf planets in our Solar System. Pluto is a dwarf planet.

We live on Earth. Earth is the third planet from the Sun. It is the only planet in our Solar System where life is currently found.

Astronauts

An astronaut is a person who has trained to travel into space. They have to train for a long time. Astronauts travel into space in a rocket. Some astronauts have visited the Moon. Others have orbited Earth or visited the International Space Station.

Famous astronauts

Yuri Gagarin was a Russian pilot and an astronaut. He is famous for being the first man to go into space on 12th April 1961.

Neil Armstrong was an American astronaut. He was the first man to walk on the Moon on 20th July 1969.

Helen Sharman was the first British astronaut to travel into space, visiting the Russian *Mir* space station in 1991.

Tim Peake is a British astronaut who spent 185 days in space aboard the International Space Station in 2015 and 2016.

Moons

A moon is a natural object that orbits a planet. Earth has one moon. Mars has two moons and Jupiter has over 60 moons.

The Moon

Earth's moon is made from rock. The Moon does not give off light. It reflects the Sun's light like a mirror. The Moon is always in the sky but the Sun shines so brightly in the day that it is hard to see.

Moon buggies

A moon buggy, or lunar roving vehicle, was used to transport astronauts on the surface of the Moon. It had a battery-powered motor and four special wheels that could move easily over the dusty surface. The chassis held some of the equipment the astronauts needed.

An axle is....

An axle is a rod or spindle that passes through a wheel to connect 2 wheels.

Geography- Human and physical features seen from space:

Human	Physical
City	Sea
Town	mountain
Village	Beach
Wall	river
Farm	

Compass directions: North, South, East and West.

Language of direction:

Near far
left right
straight ahead

Things are made from materials.

Some materials are better than others for doing certain jobs.

Materials can be grouped in different ways.

Wood

Wood is hard, strong and can be cut. It is used to make houses and furniture.

Plastic

Plastic can be made into any shape. It can be soft or hard. It is used to make toys and bottles.

Glass

Glass is transparent and waterproof. It can be made into different shapes. It is used to make windows.

Metal

Metal is very strong, hard and shiny. It can be made into different shapes. It is used to make cars and coins.

Glossary

asteroid	A large rock that orbits around the Sun.
International Space Station	A large spacecraft that orbits Earth. It is home to astronauts and contains a laboratory for carrying out scientific investigations.
orbit	A curved path in space around a planet or star.
planet	A large, spherical object in space that moves around the Sun or another star.
rocket	A vehicle or object that is launched into space by a powerful rocket engine.
space	The universe beyond the Earth.
star	A huge ball of hot gas. The Sun is a star.
transparent	A property of a material meaning that light can pass through it, and it can be seen through.
waterproof	A property of a material meaning that water cannot pass through it.
